Genetic Counseling

Results Counseling for Uveal Melanoma Prognostic Genetic Testing

Your doctor may refer you to a genetic counselor to discuss the results of your Impact Genetics Uveal Melanoma Prognostic Genetic Test. A genetic counselor is a health care professional with a master's degree in human genetics or genetic counseling. The role of a genetic counselor is to help you better understand your genetic results. The training they receive enables them to discuss technical genetic information in practical, useful terms.

What happens during a Uveal Melanoma Prognostic Genetic Test results counseling session?

The genetic counselor will lead you through a discussion of your Impact Genetics Uveal Melanoma Prognostic Genetic Test results. As part of the results counseling session, the genetic counselor will:

- Review the genetic tests that were performed on your uveal melanoma tumor sample
- Discuss the implications of the prognostic genetic test results, including your individual survivorship prediction results
- Explain benefits and limitations of the test results and their interpretation

How do I schedule an appointment with a genetic counselor?

If your physician refers you to discuss the results of your Uveal Melanoma Prognostic Genetic Test results with a genetic counselor, you may schedule an appointment with a genetic counselor from Integrated Genetics, a company affiliated with Impact Genetics through common ownership. Please wait four to six weeks after genetic testing was initiated on your uveal melanoma tumor sample before scheduling. Integrated Genetics will confirm that your results are complete and ready to review prior to the results counseling session.

You can access the online booking system at <http://impactgenetics.com/genetic-counseling> or call **855-GC-CALLS** or **855. 422. 2557** to obtain additional information and to schedule an appointment.
